

A Note on Distribution Shifting

Michael Conrad

June 12, 2026

Abstract

This is a reference paper for the LaTeX paper storage infrastructure.

1 Introduction

This paper demonstrates the build pipeline for LaTeX papers stored in this repository.

2 Mathematics

Consider a distribution shift function $f : \mathcal{X} \rightarrow \mathcal{Y}$ defined as:

$$f(x) = \int_{\Theta} p(\theta \mid x) d\theta \tag{1}$$

Equation 1 shows the fundamental relationship, as established in previous work [1].

3 Conclusion

This reference paper verifies that the build pipeline produces correct output.
